

Contents

I	Kinematics and Statics	1
1	Finite Strain	3
1.1	Definition of strain	3
1.2	Displacement and deformation	5
1.3	Deformation Gradient	6
1.4	Geological observation of deformation	11
1.5	Tensorial representation of strain ellipsoid	12
1.6	Green's and Almansi's finite strain tensors	16
1.7	Shear zone	18
1.8	Deformation history	22
1.9	Exercises	28
2	Infinitesimal Strains and Their Accumulations	31
2.1	Infinitesimal strain	31
2.2	Time rate of change	36
2.3	Strain rate	37
2.4	Pile up of infinitesimal deformations	39
2.5	Rotation	42
2.6	Paleomagnetic rotation	46
2.7	Deformation of rock mass by the activity of minor faults	53
2.8	Exercises	56
3	Stress, Balance Equations, and Isostasy	59
3.1	Definition of stress	59
3.2	Cauchy's stress formula	62
3.3	Force balance	64
3.4	Symmetry of stress tensor	67
3.5	Conservation of energy	68
3.6	Self gravitational, spherically symmetric body	70

3.7	Isostasy	74
3.8	Balance between ocean and continent	76
3.9	Sediment load	78
3.10	Quantitative stratigraphy	80
3.11	Tectonic force caused by horizontal density variations	83
3.12	Thermal isostasy	86
3.13	Horizontal stress resulting from topography	91
3.14	Thermal subsidence of continental rifts	92
3.15	Kinematic model of syn-rift subsidence	95
3.16	Exercises	98
4	Principal Stresses	101
4.1	Principal stresses and principal stress axes	101
4.2	Tectonic stress	103
4.3	Mohr diagram	106
4.4	Boundary conditions of stress	112
4.5	In-situ stress measurements	115
4.6	Dikes as paleostress indicators	116
4.7	First-order regional stress field	118
4.8	Exercises	121
II	Dynamics	123
5	Constitutive Equations	125
5.1	Stress-strain diagram	125
5.2	Representation theorem	128
5.3	Exercises	129
6	Faulting and Brittle Strength	131
6.1	Primary fractures	131
6.2	Coulomb-Navier criterion	135
6.3	Anderson's theory of faulting	137
6.4	Frictional strength of fault	138
6.5	Effect of pore fluid pressure	139
6.6	Reactivation of fault	141
6.7	Depth dependence of brittle strength	144
6.8	Joint	147
6.9	Exercises	151

7	Elasticity	153
7.1	Linear elasticity	153
7.2	Earth Pressure at Rest	157
7.3	Stability of elastic rock masses	159
7.4	Thermal stress	160
7.5	Global thermal changes and surface stress field	165
7.6	Exercises	169
8	Flexure	171
8.1	Regional isostasy	171
8.2	Flexure of thin elastic plate	174
8.3	Flexure of the oceanic lithosphere	181
8.4	Buckling	185
8.5	Rift shoulder uplift	192
8.6	The degree of compensation	195
8.7	Effective elastic thickness estimated from gravity anomalies	197
8.8	Lunar mare tectonics	200
8.9	Exercises	203
9	Fluid	205
9.1	Fluids	205
9.2	Stream function	208
9.3	Viscous relaxation	212
9.4	Self-organizing geological structures	215
9.5	Dynamic topography	225
10	Plasticity	237
10.1	Quasilinear Fluids	237
10.2	Principal stress space	239
10.3	Yield conditions	242
10.4	Plastic yielding by folding	246
10.5	Slip line theory	248
10.6	Collapse of impact craters	251
10.7	Bingham model for complex craters	255
10.8	Power-law fluid	259
III	Special Topics	269
11	Determination of Stress from Faults	271
11.1	Mesoscale faults	271

11.2	Wallace-Bott hypothesis	273
11.3	Stress inversion	280
11.4	Fry's formulation of stress inversion	282
11.5	Multiple inverse method	285
11.6	Slip tendency	288
11.7	Faulting controlled by strain	290
11.8	Reches' model	291
11.9	Block rotation and faulting	300
12	Dynamics of the Lithosphere	303
12.1	Strength profile	303
12.2	Stretching instability of the lithosphere	307
12.3	Factors controlling t_e of the continental lithosphere	312
12.4	Periodic deformation of the lithosphere	315
A	List of Symbols	323
B	Stress Inversion	327
C	Basic Equations	329
C.1	Vectors	329
C.2	Dummy and free indices	331
C.3	Rotation of coordinates	332
C.4	Matrices	333
C.5	Eigenvalues and eigenvectors	334
C.6	Tensors	337
C.7	Polar decomposition	342
C.8	Calculus	344
C.9	Rotation	346
C.10	Exercise	349
D	Answers to Selected Problems	351
	References	369
	Index	379
